Introduction

Bhadantācārya Buddhadatta Pāli Promotion Foundation is a non-governmental educational, social and religious organization. It is completely a non-profit organization. It was founded on October 14, 2011 at Sougatageham, Umri, (Madhya Pradesh) by Dr. Prafull Gadpal with the view of propagation and promotion of Pāli language and Buddha-Dhamma under his direction and leadership. The foundation started publishing 'Dhamma-Sandesh' journal from the time to its establishment. The main purpose of this journal is to present the humanistic-teachings of Lord Buddha in its fundamental form.

The Foundation drafts various plans & projects and tries to implement them successfully with the cooperation of its skilful members to promote the ancient and classical language Pāli.

Although the main setup of the foundation will operate in India but it will function also in abroad, considering global-popularity and opportunities of the Pāli language.

Pali Computational Linguistics

Pali Computational linguistics is the scientific and engineering discipline concerned with understanding written and spoken language from a computational perspective, and building artifacts that usefully process and produce language, either in bulk or in a dialogue setting. To the extent that language is a mirror of mind, a computational understanding of language also provides insight into thinking and intelligence. And since language is our most natural and most versatile means of communication, linguistically competent computers would greatly facilitate our interaction with machines and software of all sorts, and put at our fingertips, in ways that truly meet our needs, the vast textual and other resources of the internet.
